

Task 3 – Evaluation & Testing – Maxwell

Testing - Yasmin Zammit Plum

IPO Chart: index.html		
INPUT	PROCESS	OUTPUT
1. Page Loads User opens the website.	The browser reads the HTML, links up the Bootstrap styles, grabs the Google Fonts, and loads the main style sheet.	The homepage layout appears with a hidden skip-navigation link for screen readers, a transparent header nav menu, and the hero section.
2. Carousel Timer Runs automatically every 3.5 seconds	The Bootstrap JavaScript counter tracks the interval time for the banner slideshow.	The active image slides away and smoothly transitions to the next model photograph
3. Scrolling the Page User scrolls down past 80px	A built-in JavaScript scroll listener checks how far down the user has gone and adds the .nav-scrolled class to the navbar.	The navigation header switches from being transparent to a solid dark navy background color so it stays readable over content.
4. Dragging / Swiping the 3D Gallery User drags with a mouse or swipes on a phone	A custom script calculates the distance of the swipe. If it passes the 50px threshold, it updates the variable and triggers the function to swap image paths.	The five model cards shuffle left or right in a 3D fan effect, putting a new model portrait right in the center slot.
5. Clicking Menu Links or CTA Buttons Clicks "Models", "Login", or "Apply Now"	The browser reads the anchor tags corresponding to whichever link or button was clicked	The current page unloads and redirects the user to the correct sub-page, like the login form or the model application page.
6. Clicking the Accessibility Button User clicks the universal access icon in the footer	The browser registers a click handler on a button set up	Nothing happens yet visually since a modal isn't coded, but it prepares screen readers for a pop-up options panel

Test Case Table: index.html

	System inputs	Expected Result	Actual Result	Status
1	Opening the website	The homepage should load completely with all fonts, structural sections, etc.	The page loads correctly. With all the stuff motioned.	Works/Pass
2	Carousel Timer Sequence	The model slider should automatically transition to the next slide smoothly every 3.5 seconds.	The slides does indeed automatically transition to next slide, and I counted/timed	Works/Pass
3	Vertical Page Scrolling	The navigation bar should switch from transparent to solid dark blue to preserve readability over content.	I mean it does switch from transparent to blue but only for like a sec, as in it doesn't stay blue while I scroll	Works/Fail
4	3D Gallery Drag/Swipe Interaction	Swiping or dragging shuffle the model cards left/right.	It does actually shuffle the models' cards, but only the models not the new faces	Works/Pass
5	Navbar & Footer Link Redirection	Clicking navigation links like "Models" or "Apply Now" should unpack and take the user to the correct sub-page.	Both links takes me to their sub pages	Works/Pass
6	Accessibility Trigger Button Click	Clicking the universal access button should launch an overlay modal panel for contrast/font adjustments.	The button action trigger doesn't work, just when I click it, it just change color, that all	Doesn't work/Fail

[About this checker](#) • [Report an issue](#)

What I did was paste the code of index.html into <https://validator.w3.org/> and showed no errors, I don’t know if that how to do it, but I also think there is no errors in the homepage , since everything works.

IPO Chart: models.html

INPUT	PROCESS	OUTPUT
1. Page Loads User opens the website.	The browser requests the file, styles it using Bootstrap, applies individual white background adjustments.	The catalog page renders, revealing a cream-toned search container at the top and a structured 4-column responsive product card grid showing the models.
2. Clicking the "Filters" Toggle Button automatically every 3.5 seconds	Bootstrap's built-in collapse handler detects the click target tracking and toggles the panel visibility status.	The detailed dark blue filter criteria panel slides open smoothly below the search box, exposing checkbox groups and radio options.
3. Typing in the Search Field User inputs text into the search bar	The browser records text strings entered inside the box.	The search string is cached, though without custom JS handlers present, it does not auto-filter the DOM elements yet.
4. Selecting Filter Constraints User drags with a mouse or swipes on a phone	The browser registers changes in state on target checkboxes and radio buttons.	he specified inputs display standard visual radio fill points or checkmark states styled with a gold.
5. Clicking "Clear Filters" User clicks the reset button in the panel	CSS rules track interactive focus parameters using the state triggers	All selected checkboxes and radio buttons immediately clear out and revert back to their default unselected states visually.
6. Hovering focus on a Model Card Mouse overlay or Tab index focus alignment	The browser registers a click handler on a button set up	The model portrait scales upward smoothly and a dark navy overlay fades in showing organized measurement lists.
7. Clicking an Active Model Profile Card Clicks on Millie, Elena, or Sofia	The browser reads the link tags on the active model card	The catalog layout unloads, routing the browser view smoothly over to the individual model's custom detail page.
8. Clicking the Accessibility Button User clicks the universal access icon in the footer	The browser registers a button click interaction	No interaction takes place

Test Case Table: models.html				
	System inputs	Expected Result	Actual Result	Status
1	Opening models.html	The page should display the model grid layout correctly and adapt responsively across desktop	The layout renders perfectly. The Bootstrap grid columns stack neatly when I minimize the widow	Works/Pass
2	Filters Panel Toggle	Clicking the button should trigger Bootstrap's collapse feature to smoothly slide open the dark blue filtering panel.	The panel expands and hides smoothly using native Bootstrap	Works/Pass
3	Filter Selection & Clearing	Inputs should register checkmarks with gold styling, and clicking "Clear Filters" should reset all inputs to blank simultaneously.	Yes, it does change color to gold when someone clicks on it and also when I click clear filters, they restart	Works/Pass
4	Search & filter operations	Typing text into the search bar or clicking "Apply Filters" should actively hide non-matching model cards from the grid.	Both features are purely cosmetic placeholders. So, you can't search anytime and the filters doesn't work	Doesn't work/Fail
5	Tabbing through model cards	Tabbing with a keyboard should focus each model card and automatically fade in the dark overlay showing their measurements.	Yes, it does when I press tab on my keyboard, it goes from left to right with each showing their measurements	Works/Pass
6	Clicking profiles & access button	Clicking a card should open their specific sub-profile, and clicking the footer accessibility icon should launch an options dialog.	Cards one to two do work and go to their sub pages but the rest don't, and the accessibility icon doesn't work when clicked, just color change.	Yes/No

IPO Chart: casting calls.html

| <u>INPUT</u> | <u>PROCESS</u> | <u>OUTPUT</u> |
|--|---|---|
| 1. Page Loads
User opens the website. | The browser requests the file, renders the styling architecture, handles structural variables, and begins cycling the auto-advancing banner images. | The casting interface renders, showcasing a responsive banner photography carousel and chronological project opportunities. |
| 2. Clicking the Filters Toggle
User selects the "Filters" option | Bootstrap's collapse triggers intercept the interaction target mapping and open or close the filter options container. | The multi-column filtering layout slides downward smoothly, displaying organized category and location checkbox configurations. |
| 3. Filling the Application Form
Typing personal criteria inside inputs | The DOM records and checks string configurations, options elements, and text. | Form inputs display character variables visually and enforce required status field parameters natively. |
| 4. Submitting an Application
User clicks "Submit Application" | JavaScript intercepts the form submit action. | The application form layout slides out of focus, and an elegant, gold-accented custom confirmation |
| 5. Clicking "Apply Filters" or "Reset"
Interacting with filter controllers | The browser registers click interaction vectors targeting the submission button | the layout states fail to manipulate or filter the underlying casting project cards. |
| 6. Footer Button Interaction
Clicking social anchors or utility button | The web engine catches standard routing click targets or checks accessibility buttons mapping to layout dialogue windows. | Standard URLs route |

| Test Case Table: casting calls.html | | | | |
|-------------------------------------|------------------------------------|---|--|-------------------|
| | System inputs | Expected Result | Actual Result | Status |
| 1 | Opening casting-calls.html | The grid architecture must render properly, and the image carousel should automatically advance slides | The page initializes correctly. The Bootstrap carousel changes slides | Works/Pass |
| 2 | Clicking the "Filters" button | Clicking the button should toggle Bootstrap's collapse | The panel expands and collapses with clean visual acceleration attributes, managed by native Bootstrap | Works/Pass |
| 3 | Search Filtering Actions | Selecting filters and pressing "Apply Filters" should screen listings. Pressing "Reset" should clear selection tags. | The buttons are fully styled but act as static elements, as in they doesn't change to the chosen filter. | Doesn't work/Fail |
| 4 | Form Integration Triggers | Selecting any card's call-to-action asset must pull forward the custom, centered modal container holding the entry fields. | The buttons are fully he target event opens correctly. The background dims, and focus shifts directly onto the cream container form. | Works/Pass |
| 5 | Submitting valid form details | Submitting the form should bypass a standard page refresh, dismiss the overlay frame, and bring forward a success verification window | It does works when you fill the name, email and experience level, it will open a small success verification window | Works/Pass |
| 6 | Clicking view links & access icons | Details links should direct users to structural descriptions, and the universal access icon should pull forward accessibility profiles. | the footer accessibility button contains zero functional code. | No |

IPO Chart: contact.html

INPUT	PROCESS	OUTPUT
1. Opening the Page User goes to contact.html	The browser reads the HTML tags, loads the Bootstrap styles, and sets up the page layout.	Displays the big gold "CONTACT US" title, the empty form sections, and the navy info bar at the bottom.
2. Typing in Details User fills out their name, email, message, etc.	The browser holds onto the text typed into each box until the user interacts with a button.	The text appears on the screen inside the input fields as the user types.
3. Clicking Cancel User clicks the reset button	The DOM records and checks string configurations, options elements, and text.	Form inputs display character variables visually and enforce required status field parameters natively.
4. Clicking Cancel User clicks the reset button	The form listens for the click and resets all input fields back to blank.	Instantly clears all text boxes and sets the dropdown choice back to the default message.
5. Clicking Send Message User clicks the submit button	The browser checks if required fields are filled, bundles the text data together	Opens up the user's default email app (like Outlook or Mail) with the form message automatically filled in.

Test Case Table: contact.html

	System inputs	Expected Result	Actual Result	Status
1	Pressing Tab right after loading and hitting Enter	The hidden skip link should become visible and jump the user past the navbar straight to the form.	When I press enter after the tab it indeed takes you a bit father into the form	Works/Pass
2	Form Reset / Cancel Button	Clicking the cancel button should instantly wipe out everything typed without reloading the whole webpage	All text boxes, selected buttons, and the dropdown menu instantly cleared out.	Works/Pass
3	Required Fields Bypass	The browser should stop the form from sending and show an error popup because fields are required	It doesn't work because when I click send message without filling anything, it will still open an outlook widow	Doesn't work/Fail
4	Phone Number Format Check	The form's attribute should flag the input as wrong because it doesn't match the space layout (XXXX XXXX).	I can type 11 numbers and it doesn't actually block the submit button from working on click	Doesn't work/Fail
5	Department Dropdown Menu	The first option ("Please select a department") should just be a placeholder that can't actually be submitted.	Its works because it doesn't let me select it	Works/Pass
6	Shrinking the browser window down to phone size	The side-by-side photo and form should stack into a neat single column, and the big title text should shrink to fit.	The columns stack perfectly, and the workspace photo turns off automatically	Works/Pass

IPO Chart: login.html

<u>INPUT</u>	<u>PROCESS</u>	<u>OUTPUT</u>
1. Opening the Page Loading up the page	The browser loads the HTML and CSS and runs the script to see if it needs to open the login or register form.	Shows the split screen with the big model photo on the left and the login box on the right.
2. Clicking tabs or links Clicking 'Create an Account' or 'Register Now	checks for the click and swaps the hidden class around on the two form containers..	The login boxes hide and the register boxes pop up instead without making the page reload.
3. Typing into the boxes Filling in email, passwords, or clicking buttons	The browser just holds onto whatever text or choices the user puts into the fields.	The text shows up in the boxes, and the radio buttons/checkboxes get a gold dot when clicked.
4. Clicking the submit button User clicks the reset button	The form tries to submit, but since there is no backend server	The page just refreshes

Test Case Table: login.html

	System inputs	Expected Result	Actual Result	Status
1	Register Link in URL	The page should see the hashtag and load up the registration form first instead of login.	It worked, the script saw the hashtag and opened the signup form right away.	Works/Pass
2	Clicking the 'Create an Account' button	The login boxes should disappear and the signup fields should show up.	Works fine. The tabs swap instantly and the active one gets a white background.	Works/Pass
3	Leaving fields blank and clicking login	The browser should stop you and show an error telling you to fill out the box.	the browser ignored the empty boxes and let it submit anyway.	Doesn't work/Fail
4	Typing two different passwords when signing up	The page should tell you that your passwords don't match.	it lets you submit even with two different passwords.	Doesn't work/Fail
5	Making the browser window small like a phone	The big photo should hide so the screen doesn't look messy.	The CSS works perfectly and hides the photo column entirely on mobile screens.	Works/Pass

[About this checker](#) • [Report an issue](#)

I don't know if, it's a bug from my Pc or something from the code but when I press submit(login/create an account) it shows this.

This page isn't working at the moment

If the problem continues, contact the site owner.

HTTP ERROR 401

My Suggestions

Index.html – Home page

Well so far after checking and browsing through the homepage myself, I say that it looks very professional and I like the color palette that was used, the only thing what I maybe would of suggest is that the home page wouldn't be that filled with information, because I believe for example someone like me, which not really knowledge on and about models and that industry, I gotten I bit overwhelmed with the new information and some could even possibly lose interest.

models.html – Models page

Don't have many suggestions for this model page but of course the search bar and the filters doesn't work, I don't know if it's my pc, but when I press on the filter button it doesn't open smoothly, its kind of lags and a suggestion would be added two other models' cards, so it be a full 4 columns.

casting calls.html – Casting Calls page

I'm a fan of how the landscape cards/box are centered aligned and not left aligned , also what I just noticed is that the top image slider that automatically change image, there is arrow on both slides which have no functioning use, could be forgotten to delete them or even tried but failed, and what I suggest is the apply now and view details buttons , three of them aren't centered aligned inside the buttons.

contact.html – contact page

The form is very neat and professional and isn't really a lot to talk about but maybe what I would suggest is that image that is with the form, it could be with a transitions effect that for example every 5 seconds it change to a different image.

login.html – login page

Even though there really wasn't any error, what I would suggest is maybe the size of the button doesn't need to be that big and could also be a bit roundish, also like I motioned before since when you press login button it goes to a none exists page, I would of done it at least it links back meaning it takes to back to the home page.
